

HULLY

A construction site at night, illuminated by city lights and streetlights. In the foreground, several construction workers wearing orange safety vests and white hard hats are working on a concrete structure. A yellow excavator is visible on the left. In the background, a large Ferris wheel with red, white, and blue lights is the central focus. The city skyline is visible with various buildings, some with lit windows. The sky is a deep blue and purple, suggesting dusk or dawn. The overall scene depicts a busy urban construction project.

**CAPABILITY
STATEMENT**

CONTRACTING DIFFERENTLY

Since September 2015, HULLY has grown to become a leader in the civil and concrete construction industries. Our extensive experience in formwork, reinforcement and concrete has enabled us to complete some of the state's largest and most challenging civil construction projects.

As a young company we have the advantage to view the civil construction industry from a fresh, unbiased perspective, allowing us to offer innovative alternatives to traditional construction methods typically unmatched or overlooked, often resulting in savings to programme and budget.

HULLY believes the most effective method of successful project delivery is that of a 'partnership' with our clients and not that of a typical subcontractor relationship. We believe working closely and forming reciprocal relationships with our clients and suppliers is a critical aspect to executing works in a time and cost-effective manner.

SAFETY IS SUCCESS

HULLY has a people-first approach in all aspects of operations ensuring everyone goes home safely, every day. This approach to wellbeing has created a culture where everyone has a place and a voice when it comes to ensuring both physical and mental health at work and at home.

Statistically HULLY's safety and environmental record has been sound since inception. From an OHS&E perspective, our execution of works onsite is continually improving as HULLY continues to work together with all clients to deliver projects safely.

HULLY

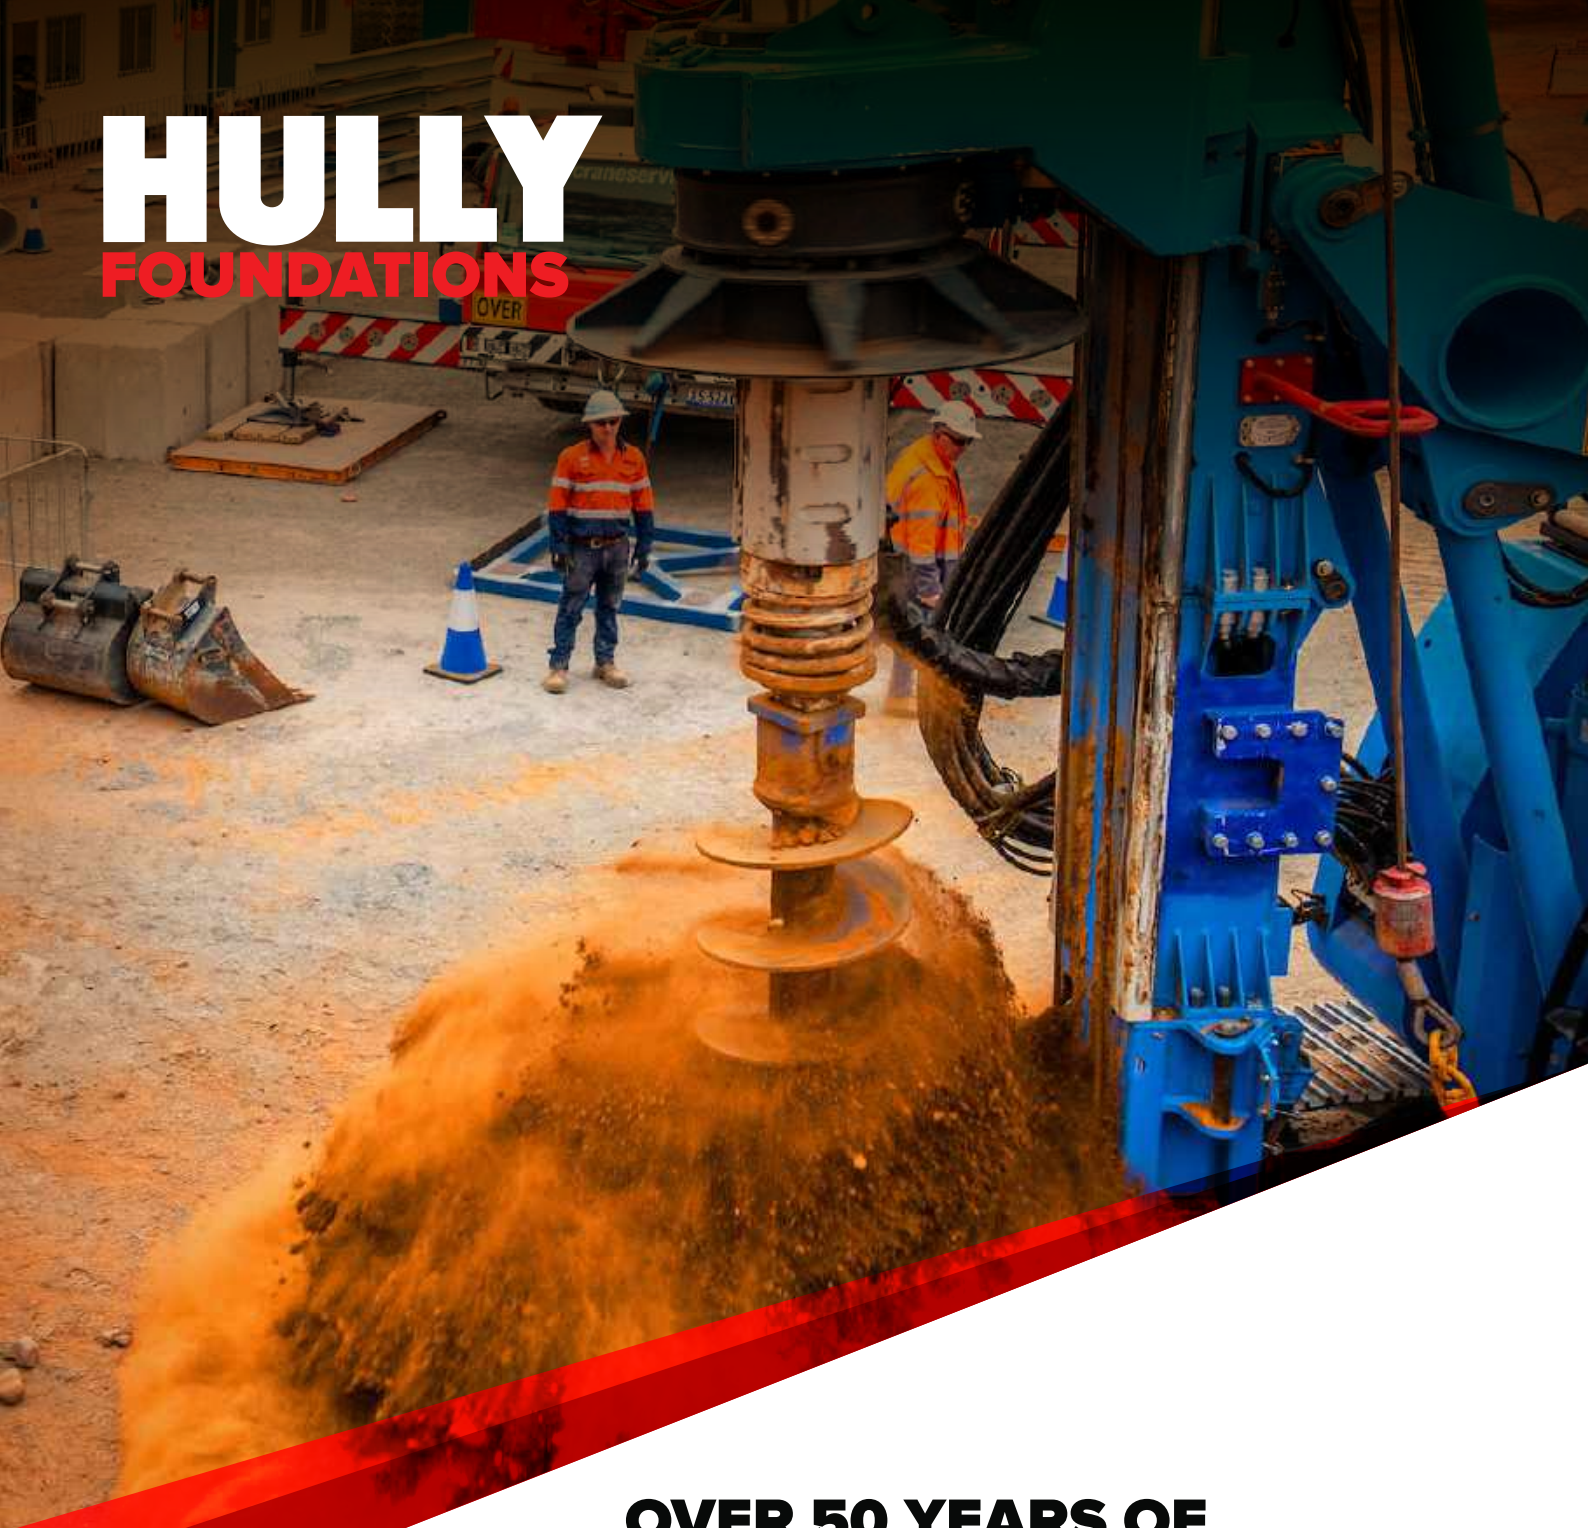

IT'S WHAT YOU CAN'T SEE

HULLY'S attitude towards safety, contracting and work execution flows company wide, with each team members ideas, values and experience playing key roles in defining the way we 'contract differently'.

HULLY-wide, we aim to avoid any individualistic attitude and maintain open communication with a family orientated culture. This is achieved through milestone celebrations, reward systems and general empowerment of all employees. Our attitude of 'contracting differently' is what we attribute to our past success and will carry us into a successful future.

HULLY FOUNDATIONS

OVER 50 YEARS OF COMBINED EXPERIENCE

HULLY Foundations works closely with clients from concept to delivery to ensure the most cost-effective foundation solution.

Operating across multiple sectors including utilities and transmission, mining, oil and gas, Infrastructure, residential and commercial building. HULLY Foundations brings a wealth of knowledge and project experience to deliver the full foundation and geotechnical contract package for our clients. Services include site preparation, ground improvements and underpinning through to piled foundations, excavations, retention systems and structural concreting techniques.

HULLY FOUNDATIONS

CRANE SERVICES

THE LARGEST RANGE OF CRANES IN SA, WE MAKE SURE YOU CAN HIRE THE RIGHT CRANE

Specialising in wet and dry hire, our cranes range in capacity from 2.5t mini crawler cranes to our 400t all-terrain mobile crane. Our cranes feature the latest technologies and are fully compliant to work on mining and construction sites throughout Australia. Our operations are strategically located around the state with our head office based in Adelaide and facilities in the Barossa Valley, Ceduna and Whyalla enabling us to better serve the requirements of our customers.
